GUYMASTER Release Note
For version 7.5.0 as of July, 2023

1. The Transmission Line and Guy databases can now be relocated to any local or network location.

2. The table headers and data precision can now be modified by the user. Double click on the table titles block to open the Editing dialog box.

3. Fixed the guyed tower convergence problem in which, because of small deflections, the values go into hysteresis, between the mast model and guy model, and fail to converge.
